

IN THE SPECIFICATION:

Please append the Abstract below to the Specification.

ABSTRACT

A storage system comprising two or more pouches, joined sequentially pouch-lip to pouch-lip by a flexible coupling portion, wherein each coupling portion flexes to permit manipulation of the joined set of pouches, combines advantageous modes of storage, display and access, such as paging, tipping/fan, accordion, parallel, push down, reverse parallel, and pull up modes, with a greatly simplified manufacturing process.

Please append a new paragraph 0150 to the Specification:

[0150] The storage system described above is very versatile product suitable for use with a wide variety of inserts, whether planar or non-planar objects, solids or liquids, and for a wide variety of end uses, such as uses directed to improved identification, retrieval, or dispensing of stored inserts. However, all embodiments of the invention, regardless of construction or use, possess common, special technical features, i.e., (1) two or more pouches, (2) joined sequentially pouch-lip to pouch-lip by a flexible coupling portion, and (3) wherein each coupling portion flexes to permit manipulation of the joined set of pouches; “manipulation”, as defined in paragraphs 10, 11, and elsewhere above, includes closing, paging, tipping/fan, accordion, parallel, push down, reverse parallel, and pull up modes of display and access of the chained pouches. These three special technical features provide unity of invention.
